

## Agenda

- { 1) Preprocessing [concept]
- 2) Do some questions based on this concept

Q1. Given an array of N elements & Q queries

For each of the query, print sum of ele from index s to e [s & e will be given to you for each query]

eg       $0 \quad 1 \quad 2 \quad 3 \quad 4 \quad 5 \quad 6 \quad 7 \quad 8 \quad 9$   
 $A[] = \{ -3, 6, 2, 4, 5, 2, 8, -9, 3, 1 \}$

Q queries

5

$start[] = \boxed{4} \boxed{2} \boxed{1} \boxed{0} \boxed{7} \leftarrow$

$end[] = \boxed{8} \boxed{7} \boxed{3} \boxed{4} \boxed{7} \leftarrow$

Queries

$s \leq e \quad \text{sum}$

4      8      9

2      7      12

1      3      12

0      4      14

7      7      -9

Brute Force : for each query, find the sum from s to e

for( K = 0 ; K < Q ; K++ ) {    // Q iterations

    s = start[K]

    e = end [K]

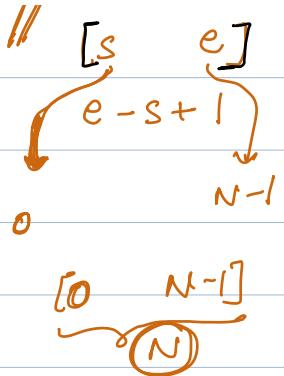

    sum = 0

        . . . . . S     "

```

for (i = s ; i <= e ; i++) {
    sum += A[i]
}
print(sum)

```

TC

$O(Q \times N)$

SC  $O(1)$

$$A[] = \{ 4, 1, 3, -1, 6, 5 \}$$

$$Q = 4 \quad \downarrow \quad \downarrow \quad \downarrow \quad \downarrow$$

$$\text{start}[] = \boxed{0 \ 0 \ 0 \ 0}$$

$$\text{end}[] = \boxed{5 \ 5 \ 5 \ 5}$$

$$1 \rightarrow N$$

$$Q \rightarrow Q \times N$$

Cricket ? .

Given Indian Cricket team scored for first 10 overs of batting , you've to answer some questions

overs	1	2	3	4	5	6	7	8	9	10
scores	2	8	14	29	31	49	65	79	88	97

Runs scored in last over.  $97 - 88 = 9$

$$[10 \ 10] = \text{score}[10] - \text{score}[9]$$

Runs scored in last 5 overs:  $97 - 31 = 66$

$$[6 \quad 10] = \text{scores}[10] - \text{scores}[5]$$

Runs scored from  $[3 \quad 6]$  :  $49 - 8 = 41$

$$[3 \quad 6] = \text{scores}[6] - \text{scores}[2]$$

Runs scored in 7th :  $65 - 49 = 16$

$$[7 \quad 7] = \text{scores}[7] - \text{scores}[6]$$

$$\underline{\text{Score}} \quad [4 \quad 9] = \text{score}[9] - \text{score}[3]$$

$$88 - 14$$

Since we're given cumulative score

to find answer for some range  
we're just doing subtraction

0 1 2 3 4 5 6 7 8 9

$$A[] = \{-3, 6, 2, 4, 5, 2, 8, -9, 3, 1\}$$

$$PF[] = \{-3, 3, 5, 9, 14, 16, 24, 15, 18, 19\}$$

prefix sum

$$PF[0] = A[0]$$

$$PF[1] = A[0] + A[1]$$

$$PF[0]$$

$$PF[2] = A[0] + A[1] + A[2]$$

$$PF[1]$$

$$PF[3] = A[0] + A[1] + A[2] + A[3]$$

PF[2]

$$PF[i-1] = \frac{A[0] + A[1] + A[2] + A[3] + \dots + A[i-2] + A[i-1]}{PF[i-2]}$$

$$PF[i] = \frac{A[0] + A[1] + \dots + A[i-1] + A[i]}{PF[i-1]}$$

$$\underline{PF[i] = PF[i-1] + A[i]}$$

int PF[N]

$$PF[0] = A[0]$$

```
for(i=1; i<N; i++) {  
    | PF[i] = PF[i-1] + A[i]  
    }  
}
```

} TC → O(N)  
SC → O(N)

0 1 2 3 4 5 6 7 8 9

$$A[] = \{-3, 6, 2, 4, 5, 2, 8, -9, 3, 1\}$$

$$PF[] = \{-3, 3, 5, 9, 14, 16, 24, 15, 18, 19\}$$

Queries

$$s \leq e \quad \underline{\text{sum}}$$

$$4 \quad 8 \quad PF[8] - PF[3] = 18 - 9 = 9$$

$$2 \quad 7 \quad PF[7] - PF[1] = 15 - 3 = 12$$

$$1 \quad 3 \quad PF[3] - PF[0] = 9 - (-3) = 12$$

$$i \quad j \quad PF[j] - PF[i-1]$$

$$0 \quad 4 \quad PF[4] - PF[0-1]$$

~~PF[0-1]~~

PF[-1]

PF[4]

$$\text{sum}(i, j) = PF[j] - PF[i-1]$$

and

if  $i = 0$  then  $PF[j]$

① Create  $PF[]$  //  $N$  iterations  $\Rightarrow O(N)$

②  $\text{for}(K=0; K < Q; K++)\{$  //  $Q$  iterations  $\Rightarrow O(Q)$

$s = start[K]$

$e = end[K]$

if ( $s == 0$ ) {

    sum =  $PF[e]$

}

else {

    sum =  $PF[e] - PF[s-1]$

print(sum)

constant

$PF[]$

Q2. Given an array of size N, count no. of  
equilibrium index.

An index is said to be equilibrium index if -

sum of all ele by  
ith index = sum of all elements  
after ith index

i

{ 0      i-1 }

{ i+1      N-1 }

	0	1	2	3	4	5
	4	5	1	7	2	9
leftsum	0					
rightsum						0

$A[ ]:$  -7 1 5 2 -4 3 0

leftsum	0	-7	-6	-1	1	-3	0
rightsum	7	6	1	-1	3	0	0

ans: 2

X	X	X		X	X		
0	1	2	3	4	5		
A[ ] :	3	-1	2	-1	1	2	1

left arm	0	3	2	4	3	4	6
right	4	5	3	4	3	1	0

Ans: 2

A diagram illustrating the concept of a left sum. It shows a yellow rounded rectangle containing the subarray indices  $[0, i-1]$ . Above this rectangle, the text "left sum" is written in blue, with a horizontal line connecting it to the top edge of the yellow box. To the right of the yellow box, there is a small blue bracketed label "i" at the top and a curly brace below it, both pointing towards the index  $i-1$ .

$\text{sum}(0, \{-\})$

$$= P_F[-1] - P_F[0-1]$$

rightsum  
[i+1 N-1]

$$\text{sum}(i+1, N-1) =$$

$$\text{PF}[N-1] - \text{PF}[i+1 - x]$$

PF[N-1] - PF[i]

$$\text{sum}(s, e) = \text{PF}[e] - \text{PF}[s-1]$$

L

T

$$\text{sum}(s, e) = \text{PF}[e] - \text{PF}[s-1]$$

N=7

$\equiv$

0	1	2	3	4	5	6
---	---	---	---	---	---	---

A[]	-7	1	5	2	-4	3	0
-----	----	---	---	---	----	---	---

PF[]	-7	-6	-1	1	-3	0	0
------	----	----	----	---	----	---	---

leftSum	0	-7	-6	-1	1	-3	0
---------	---	----	----	----	---	----	---

rightSum	7	6	1	-1	3	0	0
----------	---	---	---	----	---	---	---

## ① construct PF[]

Count = 0

② for( $i=0$ ;  $i < N$ ;  $i++$ ) {

    if ( $i == 0$ ) leftSum = 0

    else leftSum = PF[i-1];

    rightSum = PF[N-1] - PF[i];

    if (leftSum == rightSum) {

        Count ++

}

}

..

Edge Case

$i=0$

leftSum = PF[i-1]

PF[-1]  
 $\equiv$

0

$i=N-1$

NO ISSUE!  
Here

rightSum = PF[N-1] -  
P[i]

PF[N-1] - PF[N-1]

return count

= 0

$$TC: O(N) + O(N) = O(N)$$

$$SC: O(N)$$

$$\text{sum}(s, e) = PF[e] - PF[s-1]$$

{ Do it without  
using PF array.

Flipkart

Ques. Given array of N ele & Q queries, for each query, calc sum of all even indices in given array

A[]: 0 1 2 3 4 5 6 7  
3, 4, -2, 8, 6, 2, 1, 3

s	e	sum
2	5	4
3	7	7
0	7	8

Odd indices  
have to  
skip to  
play.

A[]: 0 1 2 3 4 5 6 7  
3, 0, -2, 0, 6, 0, 1, 0

PF[]: 3 3 1 1 7 7 8 8

s e  $PF[e] - PF[s-1]$

$$\begin{array}{cc}
 \text{1} & \text{2} \\
 \text{3} & \text{7} \\
 \text{0} & \text{7}
 \end{array}
 \quad
 \begin{array}{l}
 7 - 3 = 4 \\
 8 - 1 = 7 \\
 8
 \end{array}$$

0	1	2	3	4	5	6	7
A[]: 3, 4, -2, 8, 6, 2, 1, 3							
PF-even[]: 3 3 1 1 7 7 8 8							

PF-even [ ]

① PF-even[0] = A[0]

```

for ( i=0; i< N; i++ ) {
    if ( i % 2 == 0 ) {
        PF[i] = PF[i-1] + A[i]
    }
}

```

```

else {
    PF[i] = PF[i-1]
}

```

}

}

② Answer are Quirled.

$T C \rightarrow O(N) + O(Q)$

$S C \rightarrow O(N)$
